

Algebra Made Simple Worksheet **Answers**

Algebra is an area of maths where some numbers in an equation are unknown. To represent these, we often use letters such as a , b , x and y but you could use any other symbol. In the questions below, the value of the fruits and vegetables is unknown.

- Use your problem-solving skills to work out the value for each symbol and write them in the table.

$$3 + \text{Banana} = 14$$

$$14 - \text{Pear} = 8$$

$$3 \times \text{Grapes} = 27$$

$$\text{Fruit Basket} + 12 = 19$$

$$39 - \text{Kiwi} = 27$$

$$\text{Watermelon} \times 6 = 30$$

					
11	7	6	12	9	5

- Substitute the values from your table to complete the equations below.

$$11 + 6 = 17$$

$$5 \times 11 = 55$$

$$12 \div 6 = 2$$

$$12 - 5 + 9 = 16$$

$$9 + 5 - 11 = 3$$

$$7 \times 6 = 42$$

- Let's apply this same skill to letters instead of pictures. In the same way as the first question, calculate the value of the letters and write them in the table.

$$4 + y = 9$$

$$14 - p = 5$$

$$6 \times c = 36$$

$$r + 9 = 26$$

$$39 - a = 27$$

$$b \times 4 = 32$$

y	r	p	a	c	b
5	17	9	12	6	8
