

Algebra Made Simple Worksheet

Algebra is an area of maths where some numbers in an equation are unknown. To represent these, we often use letters such as a , b , x and y but you could use any other symbol. In the questions below, the value of the fruits and vegetables is unknown.

- Use your problem-solving skills to work out the value for each symbol and write them in the table.

$$3 + \text{banana} = 14$$

$$14 - \text{pear} = 8$$

$$3 \times \text{grapes} = 27$$

$$\text{blueberries} + 12 = 19$$

$$39 - \text{kiwi} = 27$$

$$\text{watermelon} \times 6 = 30$$

					

- Substitute the values from your table to complete the equations below.

$$\text{banana} + \text{pear} = \underline{\hspace{2cm}}$$

$$\text{watermelon} \times \text{banana} = \underline{\hspace{2cm}}$$

$$\text{kiwi} \div \text{pear} = \underline{\hspace{2cm}}$$

$$\text{kiwi} - \text{watermelon} + \text{grapes} = \underline{\hspace{2cm}}$$

$$\text{grapes} + \text{watermelon} - \text{banana} = \underline{\hspace{2cm}}$$

$$\text{blueberries} \times \text{pear} = \underline{\hspace{2cm}}$$

- Let's apply this same skill to letters instead of pictures. In the same way as the first question, calculate the value of the letters and write them in the table.

$$4 + y = 9$$

$$14 - p = 5$$

$$6 \times c = 36$$

$$r + 9 = 26$$

$$39 - a = 27$$

$$b \times 4 = 32$$

y	r	p	a	c	b
