

Money: Mixed Word Problems

Hit boy band BlueGreen are playing a concert in Lucia's hometown. She is excited to go with her parents and her best friends Jacob, Ana and Zahid.

1.
 - a. Standing tickets are £48.75 and seating are £55.20. How much more expensive are seating tickets?
 - b. Lucia buys 4 standing tickets and 2 seating tickets. How much does Lucia spend in total?
 - c. Lucia's parents are using the seating tickets. They have a special discount which allows them £4.50 off the cost of each seat. How much do their tickets cost in total with the discount?
2. Lucia's cousin Stan has got VIP tickets. They cost £65.25 per ticket, but he also added on £28.40 for a VIP merch package and £6.95 for a drink. How much did Stan spend on his ticket?

3. Here are the prices at the merch stand.

£25.00		£15.00	
£40.00		£12.85	
£22.50		£18.40	

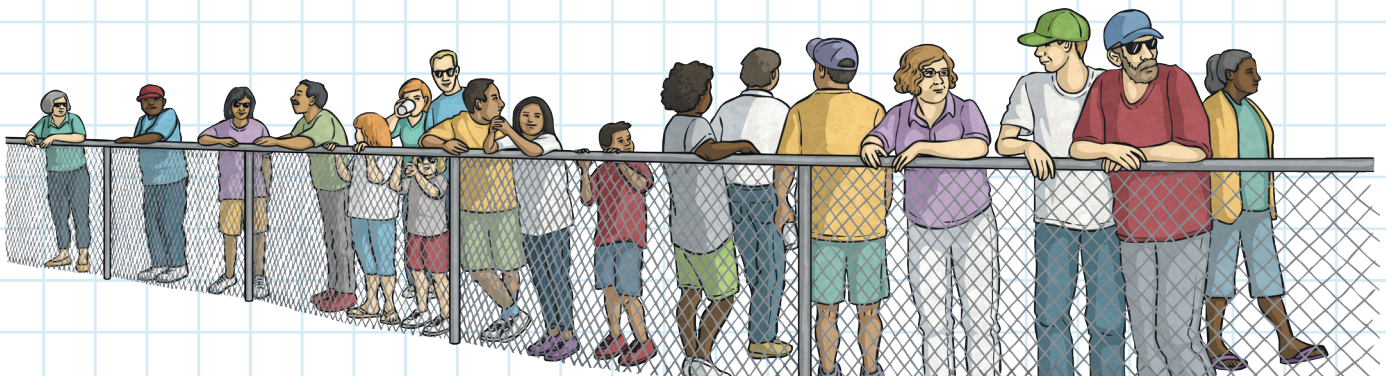

a. Ana brought £40 with her to the concert. She definitely wants to buy a t-shirt, but can she afford anything else?

b. Jacob buys a hat and two bags. How much did he spend?

c. Zahid brought £45 spending money. He buys a vest and a scarf. How much money does he have left over?

4. Lucia's dad has £56.80. He shares it equally between the four friends to spend on snacks. How much does each person have to spend?

5. Overall, Lucia paid £48.75 for her ticket, bought 3 hats for her friends who missed out, bought a hoodie for herself, and spent £18.32 on snacks and drinks. How much did the concert experience cost Lucia?

Money: Mixed Word Problems

Keeley works at the electronics shop.

1. Keeley gets £5.00 discount for every £100.00 she spends. If she was buying something that was marked at £400.00 for customers, how much would she be able to buy it for?
2. Keeley is helping a customer. They are trying to decide between a desktop computer which costs £749.50 or two laptops which cost £375.25 each. Which is the cheaper option?
3. Keeley loves gaming. She bought her console from her shop – it was £225.18 with her staff discount added. She also bought an extra controller for £38.50 and a game for £49.72. How much did she spend in total?
4. The shop is having a sale in the audio section.

£79.56

£85.79

£125.90

£92.55

£46.15

- a. How much would it cost to buy an mp3 player with some headphones?
- b. Mr Grimes wants to buy a record player and some speakers. He has £230.00. How much change will he receive?
- c. Keeley sells 6 stereos during her shift. How much did they cost in total?

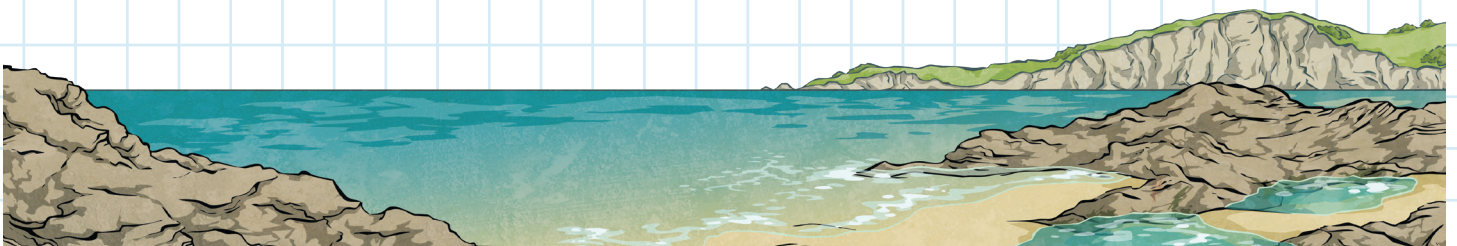

5. Mouse mats cost £8.00. A local office block spends £856.00 on mouse mats. How many did they buy?

6. Keeley is helping her friend Maxwell spend their £225.70 birthday money. They buy a £36.99 game, a £79.82 keyboard, a £12.49 phone charger and a £62.24 webcam. How much money do they have remaining?

Money: Mixed Word Problems

The Cooper family are going on holiday.

1. Flights cost £85.16 for adults, £62.95 for children and £56.40 for babies. How much will it cost for Dad and Papa to take their 2 children and 1 baby?
2. The hotel costs £526.25 for a twin room and £656.50 for a double room for the duration of their holiday. Dad and Papa will also need to pay an extra £50 to add a cot to their room for the baby. How much will the hotel rooms cost in total?
3. Papa has spotted a deal on one website that includes all flights plus the hotel booking for £1600.00. Is the deal cheaper than paying for flights and hotel separately?
4. Dad is sorting out the family's spending money for the trip.
 - a. They have £1575 in total. The holiday will last 7 days. How much spending money do they have for each day on average?

b. If they shared that money equally between the 2 adults and the 2 children, how much spending money would each person have per day?

c. Out of the £1575, Dad thinks they'll spend £90 a day on food. How much will the family have leftover each day?

5. A shuttle bus into the town centre costs £18.30 for a return family ticket. The family travelled into town 5 times during their holiday. How much did they spend on bus tickets?

6. One day, the Cooper family visited a nearby water park. Entry was £15 for adults and £12.50 for children, including babies. How much did it cost for the family's entry?

7. With the flights, hotel rooms and spending money, Dad and Papa estimated that their holiday would cost £3000.00 in total. How far off their estimation were they?

Answers

1. Standing tickets are £48.75 and seating are £55.20. How much more expensive are seating tickets?

$$£55.20 - £48.75 = £6.45$$

2. a. Lucia buys 4 standing tickets and 2 seating tickets. How much does Lucia spend in total?

$$4 \times £48.75 = £195.00$$

$$2 \times £55.20 = £110.40$$

$$£195.00 + £110.40 = £305.40$$

b. Lucia's parents are using the seating tickets. They have a special discount which allows them £4.50 off the cost of each seat. How much do their tickets cost in total with the discount?

$$£55.20 - £4.50 = £50.70$$

$$2 \times £50.70 = £101.40$$

3. Lucia's cousin Stan has got VIP tickets. They cost £65.25 per ticket, but he also added on £28.40 for a VIP merch package and £6.95 for a drink. How much did Stan spend on his ticket?

$$£65.25 + £28.40 + £6.95 = £100.60$$

4. a. Ana brought £40 with her to the concert. She definitely wants to buy a t-shirt, but can she afford anything else?

$$£40.00 - £25.00 = £15.00$$

She can afford a hat (£15.00) or a scarf (£12.85).

b. Jacob buys a hat and two bags. How much did he spend?

$$£15.00 + £18.40 + £18.40 = £51.80$$

c. Zahid brought £45 spending money. He buys a vest and a scarf. How much money does he have left over?

$$£22.50 + £12.85 = £35.35$$

$$£45.00 - £35.25 = £9.65$$

5. Lucia's dad has £56.80. He shares it equally between the four friends to spend on snacks. How much does each person have to spend?

$$£56.80 \div 4 = £14.20$$

6. Overall, Lucia paid £48.75 for her ticket, bought 3 hats for her friends who missed out, bought a hoodie for herself, and spent £18.32 on snacks and drinks. How much did the concert experience cost Lucia?

$$£48.75 + (£15 \times 3) + £40.00 + £18.32 = £152.07$$

1. Keeley gets £5.00 discount for every £100.00 she spends. If she was buying something that was marked at £400.00 for customers, how much would she be able to buy it for?

$$£100.00 \text{ spent} = £5.00 \text{ discount}$$

$$£400.00 \text{ spent} = £20.00 \text{ discount}$$

$$£400.00 - £20.00 = £380.00$$

2. Keeley is helping a customer. They are trying to decide between a desktop computer which costs £749.50 or two laptops which cost £375.25 each. Which is the cheaper option?

$$£375.25 \times 2 = £750.50$$

A desktop computer is cheaper by £1.00.

3. Keeley loves gaming. She bought her console from her shop – it was £225.18 with her staff discount added. She also bought an extra controller for £38.50 and a game for £49.72. How much did she spend in total?

$$£225.18 + £38.50 + £49.72 = £313.40$$

4. a. How much would it cost to buy an mp3 player with some headphones?

$$£46.15 + £79.56 = £125.71$$

b. Mr Grimes wants to buy a record player and some speakers. He has £230.00. How much change will he receive?

$$£125.90 + £85.79 = £211.69$$

$$£230.00 - £211.69 = £18.31$$

c. Keeley sells 6 stereos during her shift. How much did they cost in total?

$$£92.55 \times 6 = £555.30$$

5. Mouse mats cost £8.00. A local office block spends £856.00 on mouse mats. How many did they buy?

$$£856.00 \div £8.00 = 107$$

6. Keeley is helping her friend Maxwell spend their £225.70 birthday money. They buy a £36.99 game, a £79.82 keyboard, a £12.49 phone charger and a £62.24 webcam. How much money do they have remaining?

$$£36.99 + £79.82 + £12.49 + £62.24 = £191.54$$

$$£225.70 - £191.54 = £34.16$$

1. Flights cost £85.16 for adults, £62.95 for children and £56.40 for babies. How much will it cost for Dad and Papa to take their 2 children and 1 baby?

$$£85.16 \times 2 = £170.32$$

$$£62.95 \times 2 = £125.90$$

$$£56.40 \times 1 = £56.40$$

$$£170.32 + £125.90 + £56.40 = £352.62$$

2. The hotel costs £526.25 for a twin room and £656.50 for a double room for the duration of their holiday. Dad and Papa will also need to pay an extra £50 to add a cot to their room for the baby. How much will the hotel rooms cost in total?

$$£526.25 + £656.50 + £50.00 = £1232.75$$

3. Papa has spotted a deal on one website that includes all flights plus the hotel booking for £1600.00. Is the deal cheaper than paying for flights and hotel separately?

$$£1232.75 + £352.62 = £1585.37$$

$$£1600.00 - £1585.37 = £14.63$$

No, the deal is not cheaper; it's £14.63 more expensive.

4. Dad is sorting out the family's spending money for the trip.

a. They have £1575 in total. The holiday will last 7 days. How much spending money do they have for each day on average?

$$£1575.00 \div 7 = £225.00$$

b. If they shared that money equally between the 2 adults and the 2 children, how much spending money would each person have per day?

$$£225.00 \div 4 = £56.25$$

c. Out of the £1575, Dad thinks they'll spend £90 a day on food. How much will the family have leftover each day?

$$£225.00 - £90.00 = £135.00$$

5. A shuttle bus into the town centre costs £18.30 for a return family ticket. The family travelled into town 5 times during their holiday. How much did they spend on bus tickets?

$$£18.30 \times 5 = £91.50$$

6. One day, the Cooper family visited a nearby water park. Entry was £15 for adults and £12.50 for children, including babies. How much did it cost for the family's entry?

$$£15.00 \times 2 = £30.00$$

$$£12.50 \times 3 = £37.50$$

$$£30.00 + £37.50 = £67.50$$

7. With the flights, hotel rooms and spending money, Dad and Papa estimated that their holiday would cost £3000.00 in total. How far off their estimation were they?

$$£352.62 + £1232.75 + £1575.00 = £3160.37$$

$$£3160.37 - £3000.00 = £160.37$$

They were £160.37 off their estimate.
