

Interpreting Pie Charts with Percentages **Answers**

1)

2)

a) 8

b) 10

c) 20

3) You should disagree with both Elena and Priya as they are both incorrect.

Elena has incorrectly thought that 5% of 40 is 5.

Priya has found 10% of 40 and has forgotten to halve that number to find 5% of 40.

5% of 40 is 2 so 2 children chose brunch as their favourite meal of the day.

Interpreting Pie Charts with Percentages **Answers**

1)

a) 50%

b) 25%

c) 5%

d) 5%

e) 10%

f) 5%

2)

a) 100

b) 50

3) 50

4) You should disagree with Zeke as he is incorrect.

As we do not know how many people Zeke asked in the park or the supermarket, we can not assume that he has asked an equal amount of people in both places. This means that even though the section looks bigger, it does not necessarily mean that it represents more people.

Interpreting Pie Charts with Percentages **Answers**

1) 220

2)

Sweet Snack	Percentage of Children	Number of Children
ice cream	50%	110
sweets	5%	11
popcorn	5%	11
pancakes	15%	33

3) Emily is incorrect. Although the same percentage of children voted for paddleboarding in each school, this is not the same as the number of children. There are 200 children in year 6 in school A and only 100 in school B so 50% for each school will equal a different amount of children.

50% of 200 is 100

50% of 100 is 50
